APTT, activated partial thromboplastin time; INR, International Normalized Ratio; LAA, left atrial appendage; LAAFV, left atrial appendage flow velocity; LAD, left atrial diameter; LVEF, left ventricular ejection fraction; MDLAAO, maximum diameter of left atrial appendage ostium; PT, prothrombin time.

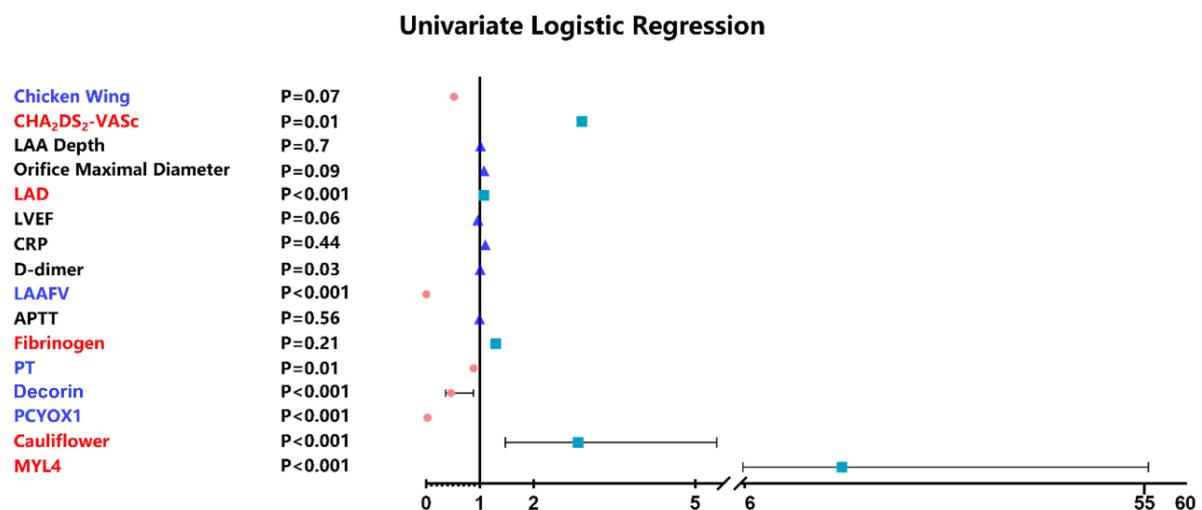

**Figure 1 of the supplementary data.** Enrichment analysis of gene ontology (GO) terms for identified proteins. The bar chart displays the top 20 enriched GO terms categorized into 3 main GO categories: biological process (BP), molecular function (MF), and cellular component (CC). Each bar represents the number of proteins associated with a specific GO term. The color of the bars indicates the *P*-value of the enrichment, with darker shades representing more significant enrichment.

**Figure 2 of the supplementary data.** Differential pathway enrichment analysis based on KEGG database. This horizontal bar chart represents the pathways significantly enriched with upregulated (shown in red) and downregulated (shown in blue) proteins, as identified through our study. The length of each bar correlates with the  $-\log_{10}(P \text{ value})$ , indicating the significance of enrichment: longer bars correspond to higher levels of significance.

**Figure 3 of the supplementary data.** Results of univariate logistic regression. LAA, left atrial appendage; LAD, left atrial diameter; LVEF, left ventricular ejection fraction; CRP, C-reactive protein; LAAFV, left atrial appendage flow velocity; APTT, activated partial thromboplastin time; PT, prothrombin time; PCYOX1, prenylcysteine oxidase 1; MYL4, myosin light chain 4.

**Figure 4 of the supplementary data.** Calibration curve for the nomogram predicting LAAT/SEC. The dashed line represents the performance of the nomogram, while the solid line corrects any deviation in the nomogram.
